Who We Are

LIFT

LIFT is a Lebanese medical device establishment specializing in the distribution of dental and orthopedic implants and related surgical products to hospitals, orthopedic surgeons and dental clinics across Lebanon.

The establishment is formally registered under Commercial Register No. 2801282 and is registered with the Lebanese Ministry of Finance. We are establishing our supply partnerships and completing Ministry of Public Health product registration ahead of our first import.

Our operating standard will be full unit traceability, documented compliance and transparent reporting — the standard we believe medical device distribution in Lebanon should be held to, for every partner we work with.

At a Glance

Legal Name	LIFT

What We Distribute

Launch Portfolio & Planned Expansion

Our launch focus is dental implantology, where demand in Lebanon is consistent and the clinical relationship is direct. Orthopedic lines follow in Years 2 and 3.

Dental Implantology

LAUNCH FOCUS

- Implant Fixtures — full diameter and length range
- Prosthetic Abutments — standard, angled and zirconia
- Healing Abutments — every diameter and height
- Prosthetic Screws — internal hex, external hex and conical
- Surgical Kits & Instrumentation

Sectioned dental implant model — fixture, abutment and crown — illustrating the implant systems LIFT distributes at launch.

Orthopedic Implants

YEAR 2 – 3

- Shoulder and ankle replacement systems
- Knee, hip and spine implants
- Bone fixation and trauma implants

Surgical Consumables

PLANNED

- Barbed and absorbable sutures
- Tissue adhesive and surgical staples

Our Market

Our target segments, and the model we will serve them with

Hospitals

Private and university hospitals in Beirut, Mount Lebanon and the North. Our model will be direct supply, with consignment stock held on site.

Orthopedic Surgeons

Specification-led relationships. The surgeon selects the implant system; we will ensure availability, sizing range and on-time delivery.

Dental Clinics

Our launch segment. Our model will be direct supply of implant systems with the size range clinics need, held in stock rather than ordered case by case.

Consignment Model

We will place stock on site so the surgeon is never short mid-procedure, and will invoice only on use — tracked unit by unit.

Why Lebanon Needs Reliable Supply

Surgeons routinely face stock shortages and long lead times. A distributor that holds the right sizes and delivers on schedule is the distributor that keeps the relationship.

Quality & Compliance

How we operate

■ Ministry of Public Health Registration

Every product will be registered with the MoPH before it is offered for sale in Lebanon.

■ Manufacturer Certification

We require CE marking, ISO 13485 and ISO 10993 documentation from every supplier.

■ Full Unit Traceability

Each implant will be tracked by lot and serial number from arrival to the patient — a legal requirement we treat as fundamental.

■ Expiry Control

Every unit will carry a recorded expiry date and be monitored continuously with advance alerts before shelf life is reached.

■ Documented Operations

Purchase orders, shipments, inventory, consignment and sales will be recorded in a single controlled system.

Working With Us

How we work with suppliers, hospitals and partners

Close to the Clinic

LIFT is built to sell directly to the surgeons and clinics who specify implants, rather than waiting for orders to come to us. Our approach is to be present in the clinic, not at the end of a supply chain.

Regulatory Handling

We handle MoPH product registration and customs clearance in full before any product reaches the Lebanese market.

For Local Distributors

Where a manufacturer is already represented in Lebanon, we are open to working under the existing partner — as a sub-distributor, dealer, or covering a defined region or product line. Our aim is to extend reach, not to compete for it.

Long-Term Intent

Our plan builds from dental implants into orthopedics over three years — we are building relationships meant to last that long.

Full Traceability

Every sale, consignment and stock position will be recorded unit by unit, and reported on request.

For Manufacturers

We are open to exclusive or semi-exclusive distribution agreements for Lebanon, with agreed volumes and territory.

Stock on Hand

We will carry a working size range rather than ordering case by case, so the implant a surgeon needs will be available when it is chosen.
